

## JQuery LAB

**Q.** Client wants to have a site to bring his business online. Create a responsive website for the client where he can sell cars.

**Step 1:** Create the responsive web layout referring the below image:

**Step 2:** Create a JSON file for car data with car name, model, price, usage info, brand and fuel type.

**Step 3:** Retrieve the data and display the available cars.

**Step 4:** User should be able to filter cars with brand, price slider and fuel type as shown in the image. Use JQuery to implement the functionality.

**Step 5:** Use JQuery to add “ads”.

### Topic Covered:

- HTML, CSS
- JS, JQuery
- JSON & AJAX
